

Choose PSU for Managed Antivirus

Ensuring your business is protected against threats is vital, but can be time-consuming to do properly. By outsourcing your antivirus, your time can be better spent on key projects to develop your IT and improve your bottom line.

Top 10 Reasons to Choose PSU for Managed Antivirus

1

Threat protection

Our specialists ensure that we use the most up to date virus definitions and software to defend you against the latest threats.

2

Scheduled scans

We set up regular scans for you, with a standard weekly schedule or more intense cycles if required.

3

Behavioural scanning

As well as scanning based on definition signatures, our scans will also detect programs and files that are performing actions similar to viruses.

4

Success checks

We perform success checks to make sure scans are completed correctly, providing extra reassurance that no issues are missed.

5

Efficient update management

To reduce bandwidth and increase efficiency, we deploy an update server which downloads updates centrally and cascades them to your endpoints, eliminating the need for every machine to check for and download updates individually.

6

Intelligent monitoring

Our service is not passive – virus definitions are installed and pro-actively monitored to identify and protect against threats.

7

Comprehensive protection

On-access scanning ensures everything from emails to USB devices are scanned for the entire time your system is powered on.

8

Proven results

We manage antivirus for hundreds of PCs, with customer estates ranging from 10 to 300 machines. In recent malware outbreaks, our customers were already protected.

9

Constant vigilance

Our servers are configured to download and distribute antivirus definition files as soon as they are available from the vendor.

10

30 years' experience

With over 30 years of IT support expertise, we look after IT for organisations of all sizes across the UK.
